

*AMENDMENTS TO THE SPECIFICATION*

**Replace paragraph 22 with:**

[0022] Referring to Figure 1, in its most basic configuration, the computing device 100 includes at least a processing unit ~~102~~ 120 and a memory ~~104~~ 130. Depending on the exact configuration and type of computing device, the memory ~~104~~ 130 may be volatile (such as RAM), non-volatile (such as ROM, flash memory, etc.) or some combination of the two. The basic configuration is illustrated in Figure 1 by a dashed lines ~~106~~. Additionally, the device 100 may also have additional features/functionality. For example, the device 100 may also include additional storage (removable and/or non-removable) including, but not limited to, magnetic or optical disks or tapes. Such additional storage is illustrated in Figure 1 by a removable storage ~~108~~ 152, 156 and a non-removable storage ~~110~~ 140, 141. Computer storage media includes volatile and nonvolatile, removable and non-removable media implemented in any method or technology for storage of information such as computer readable instructions, data structures, program modules or other data. The memory ~~104~~ 130, the removable storage ~~108~~ 152, 156 and the non-removable storage ~~110~~ 140, 141 are all examples of computer storage media. Computer storage media includes, but is not limited to, RAM, ROM, EEPROM, flash memory or other memory technology, CDROM, digital versatile disks (DVD) or other optical storage, magnetic cassettes, magnetic tape, magnetic disk storage or other magnetic storage devices, or any other medium which can be used to store the desired information and which can be accessed by the device 100. Any such computer storage media may be part of the device 100.

**Replace paragraph 23 with:**

[0023] Device 100 may also contain one or more communications connections ~~112~~ 160, 170, that allow the device to communicate with other devices. The communications connections ~~112~~ 160, 170, are an example of communication media. Communication media typically embodies computer readable instructions, data structures, program modules or other data in a modulated data signal such as a carrier wave or other transport mechanism and includes any information delivery media. The term “modulated data signal” means a signal that has one or more of its characteristics set or changed in such a manner as to encode information in the signal. By way of example, and not limitation, communication media includes wired media such as a wired network or direct-wired connection, and wireless media such as acoustic, RF, infrared and other wireless media. As discussed above, the term computer readable media as used herein includes both storage media and communication media.

**Replace paragraph 24 with:**

[0024] Device 100 may also have one or more input devices ~~114~~ such as keyboard 162, mouse 161, pen, voice input device, touch-input device, etc. One or more output devices ~~116~~ such as a display 191, speakers 197, printer 196, etc. may also be included. All these devices are well known in the art and need not be discussed at greater length here.
